Greater Toronto Area hooman-codes.ca

SUMMARY

Software Developer who builds and deploys full-stack web applications in Python, Java, and JavaScript, with REST APIs, relational databases, and automated testing. Built a tool-calling AI agent (Cohere API) that passed 15 of 15 evaluation questions at a 3.5 s average response, and a Spring Boot + MySQL dashboard that processes a 50,000-row CSV in about 3.1 s. M.Sc. Computer Science candidate, University of Colorado Boulder.

SKILLS

Python | Flask | Django | Java | JavaScript | React | SQL | HTML | CSS | Java | Spring Boot | Chart.js | Statistics | REST APIs | Unit testing | GitHub/Git | Linux | Data structures

EXPERIENCE

Independent Software Developer

Self-directed

Jan 2023 - Present

- Designed, built, and deployed six full-stack and backend applications in Python, Java, and JavaScript, with source and documentation on GitHub.

QA Tester (Contract)

Upwork

Oct 2026 - Oct 2026 Online

- Tested sign-up, login, search, and account flows on a prediction-market web app; documented a sign-up defect and UI contrast issues in a written report for the development team.

Software Engineering Job Simulations

Forage

Oct 2026 - Nov 2026 Online

- Hewlett Packard Enterprise: Developed a Java Spring Boot web server handling HTTP requests and JSON uploads; wrote and ran unit tests to evaluate performance
- Walmart: Designed a normalized database ERD and built a Python ETL script merging three CSVs into SQLite (154 shipments, 45 products)
- Datacom: Automated a push-triggered CI pipeline with GitHub Actions (YAML), using environment and context variables.

EDUCATION

M.Sc. in Computer Science

University of Colorado Boulder

Online

B.Sc. in Computer Science

University of the People

- Honours List, 2024-25

Certificate in Computer Programming Applications

Toronto Metropolitan University

TRAINING / COURSES

Web Programming
Harvard/EDX

SQL
BigDataEnergyCourses.com

PROJECTS

Department Data Assistant (AI Agent)

https://github.com/hoomanv3xo/dept-data-agent

- Built a Flask agent that answers natural-language questions by calling database tools over a synthetic university SQLite database.
- Wrote a 15-question evaluation script: 15/15 pass rate, 3.5 s average response.

Diabetes Risk Prediction App

https://github.com/hoomanv3xo/diabetes-prediction-system

- Deployed a Random Forest app on the Pima Indians dataset (768 patients); 5-fold cross-validation gave 76.9% accuracy and 67.9% recall.
- Median imputation for unrecorded values and balanced class weights raised cross-validated recall from about 59% to about 68% hooman-diabetes-prediction-system.streamlit.app

CSV Analytics Dashboard (Spring Boot + MySQL)

https://github.com/hoomanv3xo/spring-data-dashboard

- Upload a CSV to get descriptive statistics and Chart.js histograms, stored in MySQL with Spring Data JPA and JDBC.
- Batched JDBC inserts (batch size 1,000) and a timing panel: a 50,000-row CSV uploads and charts in about 3.1 s. (average of 3 runs, Intel Core i5, 16 GB RAM)

JavaScript Calculator

https://github.com/hoomanv3xo/js-calculator

- Keyboard input, chained operations, and a clickable history created and removed as DOM nodes through event handling. hooman-codes.ca/js-calculator.html

Real-time Chat App

https://github.com/hoomanv3xo/chatapp

- Load-tested with 50 concurrent WebSocket clients: 12,500 of 12,500 messages delivered, zero dropped connections.

Student Registry

https://github.com/hoomanv3xo/Registry

- Registry for students, courses, and grades; cut course-open time from about 3.4 s to about 1 ms (100,000 students, 500,000 marks) by replacing linear scans.

React Weather Dashboard

https://github.com/hoomanv3xo/React-Weather-Dashboard

- Deployed React app consuming a REST API: current conditions, 24-hour chart, 7-day forecast, city search, geolocation, and a Celsius/Fahrenheit toggle. hooman-weather.vercel.app
